1. What is the shell?

1 / 1 point

- ☒ The command-line interpreter
- ☐ Information received by the operating system (OS) via the command line
- ☐ An instruction telling the computer to do something
- ☐ Data consisting of an ordered sequence of characters

 **Correct**

The shell is the command-line interpreter. It processes commands and outputs the results.

2. After a user inputs a command into the shell, what can the shell return to the user? Select two answers.

1 / 1 point

- ☐ A request for user approval
- ☒ An error message

 **Correct**

After a user inputs a command into the shell, the shell can return output or an error message to the user. Output is the computer's response to the user's input. An error message occurs when the shell

cannot interpret the input.

- ☒ Output

 **Correct**

After a user inputs a command into the shell, the shell can return output or an error message to the user. Output is the computer's response to the user's input. An error message occurs when the shell cannot interpret the input.

- ☐ A request for more input from the user

3. What is standard error in Linux?

1 / 1 point

- ☐ Information returned by the operating system through the shell
- ☐ Information received by the operating system via the command line
- ☒ Error messages returned by the operating system through the shell
- ☐ A Linux command that outputs a specified string of text

 **Correct**

Standard error contains error messages returned by the OS through the shell.

- ☐ Information received by the operating system via the command line
- ☒ Error messages returned by the operating system through the shell
- ☐ A Linux command that outputs a specified string of text

 **Correct**

Standard error contains error messages returned by the OS through the shell.

4. What is the difference between standard input and standard output?

1 / 1 point

- ☐ Standard input is sent from the Filesystem Hierarchy Standard (FHS). Standard output is sent to the FHS.
- ☐ Standard input is sent to the Filesystem Hierarchy Standard (FHS). Standard output is sent from the FHS.
- ☐ Standard input is sent from the operating system. Standard output is sent to the operation system.
- ☒ Standard input is sent to the operating system. Standard output is sent from the operating system.

 **Correct**

Standard input is sent to the operating system. Standard output is sent from the operating system.
