1. Which tcpdump option is used to specify the network interface?

1 / 1 point

- ☐ -c
- ☒ -i
- ☐ -n
- ☐ -v

Correct

The **-i** option is used to specify the network interface; **-i** stands for interface.

2. What is needed to access the tcpdump network protocol analyzer?

1 / 1 point

- ☐ Output
- ☐ Packet capture
- ☒ Command-line interface
- ☐ Graphical user interface

Correct

tcpdump is a network protocol analyzer that is accessed through a command-line interface (CLI).

3. What is the first field found in the output of a tcpdump command?

1 / 1 point

- ☐ Source IP
- ☐ Protocol
- ☐ Version
- ☒ Timestamp

Correct

The first field found in the output of a tcpdump command is the packet's timestamp.

4. You are using tcpdump to capture network traffic on your local computer. You would like to save the network traffic to a packet capture file for later analysis. Which tcpdump option should you use?

1 / 1 point

- ☐ -f
- ☐ -w
- ☐ -c

- ☐ Protocol
- ☐ Version
- ☒ Timestamp

Correct

The first field found in the output of a tcpdump command is the packet's timestamp.

4. You are using tcpdump to capture network traffic on your local computer. You would like to save the network traffic to a packet capture file for later analysis. Which tcpdump option should you use?

1 / 1 point

- ☐ -f
- ☐ -w
- ☐ -c
- ☒ -W

Correct

You should use the **-w** option. The **-w** option lets you save the network packets to a packet capture file for later analysis.
