These code examples use the `.index()` method. Match each example to the index it returns. First, select a code example. Then, select an index to find out if it's a match.

You've categorized everything.

Code example	Index
<code>"system".index("t")</code> ✓	<code>3</code> ✓
<code>"system".index("y")</code> ✓	<code>1</code> ✓
<code>"system".index("s")</code> ✓	<code>0</code> ✓
<code>"system".index("e")</code> ✓	<code>4</code> ✓
