1. What type of attack uses multiple devices or servers in different locations to flood the target network with unwanted traffic?

1 / 1 point

- ☐ Tailgating attack
- ☐ Phishing attack
- ☒ Distributed Denial of Service (DDoS) attack
- ☐ Denial of Service (DoS) attack

Correct

A DDoS attack uses multiple devices or servers in different locations to flood the target network with unwanted traffic.

2. What type of attack poses as a TCP connection and floods a server with packets simulating the first step of the TCP handshake?

1 / 1 point

- ☐ SYN-ACK flood attack
- ☐ On-path attack

- ☒ SYN flood attack
- ☐ ICMP flood

Correct

A SYN flood attack poses as a TCP connection and floods a server with packets simulating the first step of the TCP handshake. This overwhelms the server, making it unable to function.

3. Fill in the blank: The Denial of Service (DoS) attack _____ is caused when a hacker sends a system an ICMP packet that is bigger than 64KB.

1 / 1 point

- ☐ SYN flood
- ☒ Ping of Death
- ☐ ICMP flood
- ☐ On-path

Correct

The DoS attack Ping of Death is caused when a hacker sends a system an ICMP packet that is bigger than 64KB.

4. Which types of attacks take advantage of communication protocols by sending an overwhelming number of requests to a server? Select all that apply.

1 / 1 point

Correct

The DoS attack Ping of Death is caused when a hacker sends a system an ICMP packet that is bigger than 64KB.

4. Which types of attacks take advantage of communication protocols by sending an overwhelming number of requests to a server? Select all that apply.

1 / 1 point

- ☐ TCP connection attack
- ☒ ICMP flood attack

Correct

ICMP flood and SYN flood attacks take advantage of communication protocols by sending an overwhelming number of requests to a server.

- ☐ Tailgating attack
- ☒ SYN flood attack

Correct

ICMP flood and SYN flood attacks take advantage of communication protocols by sending an overwhelming number of requests to a server.
