1. What is the main objective of a Denial of Service (DoS) attack?

1 / 1 point

- ☒ Disrupt normal business operations
- ☐ Repeatedly send ICMP packets to a network server
- ☐ Simulate a TCP connection and flood a server with SYN packets
- ☐ Send oversized ICMP packets

 Correct

2. Which of the following statements accurately describe Denial of Service (DoS) and Distributed Denial of Service (DDoS) attacks? Select three answers.

1 / 1 point

- ☒ A DoS attack involves one host conducting the attack.

 Correct

- ☒ A network device experiencing a DoS attack is unable to respond to legitimate users.

- ☒ A network device experiencing a DoS attack is unable to respond to legitimate users.

 Correct

- ☒ A DDoS attack involves multiple hosts carrying out the attack.

 Correct

- ☐ In both DoS and DDoS attacks, every part of the network must be overloaded for the attacks to be successful.

3. A security team investigates a server that has been overwhelmed with SYN packets. What does this scenario describe?

1 / 1 point

- ☐ On-path attack
- ☒ SYN flood attack
- ☐ Ping of Death
- ☐ ICMP flood attack

 Correct

4. Fill in the blank: The DoS attack _____ occurs when an attacker repeatedly sends ICMP packets to a network server.

1 / 1 point

- ☐ SYN flood
- ☐ on-path
- ☐ smurf
- ☒ ICMP flood

 Correct

5. Which of the following statements correctly describe passive and active packet sniffing? Select three answers.

1 / 1 point

- ☐ The purpose of active packet sniffing is to read data packets while in transit.
- ☒ Using a VPN to encrypt data offers a business protection from packet sniffing.

 Correct

- ☒ Active packet sniffing involves data packets being manipulated in transit.

 Correct

- ☒ Passive packet sniffing allows malicious actors to view the information going in and out of the targeted

- ☒ Passive packet sniffing allows malicious actors to view the information going in and out of the targeted device.

✓ Correct

6. As a security professional, you take steps to stop an attacker from changing the source IP of a data packet in order to impersonate your authorized system. What type of network attack are you working to prevent?

1 / 1 point

- ☐ Passive packet sniffing
- ☐ Active packet sniffing
- ☐ Ping of Death
- ☒ IP spoofing

✓ Correct

7. Fill in the blank: To reduce the chances of an IP spoofing attack, a security analyst can configure a _____ to reject all incoming traffic with the same source IP addresses as those owned by the organization.

1 / 1 point

- ☒ firewall
- ☐ HTTPS domain address

- ☐ VPN
- ☐ demilitarized zone

✓ Correct

8. In which attack do malicious actors impersonate a web browser or web server by placing themselves between the two devices, then sniffing the packet information to discover their IP and MAC addresses?

1 / 1 point

- ☐ Malware attack
- ☒ On-path attack
- ☐ Smurf attack
- ☐ Packet flooding attack

✓ Correct

9. Fill in the blank: The _____ network attack occurs when a malicious actor takes a network transmission that was sent by an authorized user and repeats it at a later time to impersonate that user.

1 / 1 point

- ☐ SYN flood
- ☐ on-path

was sent by an authorized user and repeats it at a later time to impersonate that user.

- ☐ SYN flood
- ☐ on-path
- ☐ smurf
- ☒ replay

✓ Correct

10. Which attack is a combination of a DDoS and an IP spoofing attack, during which the malicious actor overwhelms a target computer?

1 / 1 point

- ☒ Smurf attack
- ☐ Ping of Death
- ☐ On-path attack
- ☐ Replay attack

✓ Correct
