

Your grade: 100%Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.[Next item →](#)

1. Fill in the blank: ____ is the process of strengthening a system to reduce its vulnerability and attack surface.

1 / 1 point

- ☒ Security hardening
- ☐ Network hardening
- ☐ Port filtering
- ☐ SIEM

 **Correct**

2. What is the relationship between security hardening and an attack surface?

1 / 1 point

- ☐ Security hardening permanently eliminates the attack surface.
- ☒ Security hardening diminishes the attack surface.
- ☐ Security hardening expands the attack surface.
- ☐ Security hardening increases the attack surface.

 **Correct**

3. Fill in the blank: Hiring a security guard is an example of a ____ security hardening practice.

1 / 1 point

- ☐ software-based
- ☐ virtual
- ☐ network-focused
- ☒ physical

 **Correct**

4. An organization's in-house security team has been authorized to simulate an attack on the organization's website. The objective is to identify any vulnerabilities that are present. What does this scenario describe?

1 / 1 point

- ☐ Packet sniffing
- ☒ Penetration testing
- ☐ A Distributed Denial of Service (DDoS) attack
- ☐ The Ping of Death

 **Correct**

5. What are some methods for hardening operating systems? Select three answers.

1 / 1 point

- ☒ Configuring a device setting to fit a secure encryption standard

 **Correct**

- ☐ Implementing an intrusion detection system (IDS)

- ☒ Removing unused software to limit unnecessary vulnerabilities

 **Correct**

- ☒ Keeping an up-to-date list of authorized users.

 **Correct**

6. A security analyst reviews documentation about a firewall rule that includes a list of allowed and disallowed network ports. They compare it to the current firewall to ensure no changes have been made. What does this scenario describe?

1 / 1 point

- ☐ Verifying user identity when accessing an OS
- ☒ Checking baseline configuration
- ☐ Upgrading the interface between computer hardware and the user
- ☐ Responsibly managing applications

☐ Responsibly managing applications

✓ Correct

7. Which OS hardening practice requires users to verify their identity in two or more ways to access a system or network?

1 / 1 point

☒ Multi-factor authentication (MFA)

☐ Patch updates

☐ Port filtering

☐ SIEM

✓ Correct

8. Which of the following statements accurately describes port filtering?

1 / 1 point

☐ A process performed by a VPN service that protects data by wrapping it in other data packets

☒ A firewall function that blocks or allows certain port numbers in order to limit unwanted network traffic

☐ A security technique that divides a network into segments

☐ A security protocol that provides an encrypted tunnel for issuing commands from a remote server

✓ Correct

9. A security team considers the best way to handle the different security zones within their network. They prioritize protecting the restricted zone by separating from the rest of the network and ensuring it has much higher encryption standards. What does this scenario describe?

1 / 1 point

☐ Penetration testing

☐ Patch updating

☐ Cloud hardening

☒ Network segmentation

✓ Correct

10. What is one key similarity between regular web servers and cloud servers?

1 / 1 point

☐ They both use baseline images stored in the cloud to compare data.

☐ In both, all data and application are stored together, regardless of their service category.

☒ They both require proper maintenance and security hardening.

prioritize protecting the restricted zone by separating from the rest of the network and ensuring it has much higher encryption standards. What does this scenario describe?

☐ Penetration testing

☐ Patch updating

☐ Cloud hardening

☒ Network segmentation

✓ Correct

10. What is one key similarity between regular web servers and cloud servers?

1 / 1 point

☐ They both use baseline images stored in the cloud to compare data.

☐ In both, all data and application are stored together, regardless of their service category.

☒ They both require proper maintenance and security hardening.

☐ In both, all applications are stored together, regardless of their age.

✓ Correct
