

Explore entry-level security analyst responsibilities

In this activity, you'll engage in a conversation with Coursera's AI-powered guide. This activity focuses on a realistic scenario that requires you to link the various fundamental responsibilities and protective measures of an entry-level security analyst to the primary objective of securing digital assets.

Guidelines:

Chatting with Coach is like chatting with an instructor or teammate. You can ask Coach questions, get hints, or request additional examples. All you have to do is ask, and Coach will provide additional guidance to help you learn! If you're struggling with any part of the activity, click the "I'm stuck" icon in the top right corner, and Coach will reframe the question or topic.

To check on your progress, click the "How am I doing?" icon in the top right corner, and Coach will let you know how much of the activity you've completed. Once you complete the activity at 100%, you'll be given a summary highlighting what went well, or how you can improve your knowledge of the material.

Please note, Coach bases its responses on course materials, but like any AI tool, it may surface inaccurate information. If Coach provides inaccurate information or formats a message improperly, click the thumbs-down icon next to the message and describe the error, so we can address the issue.
