1. What tool is designed to capture and analyze data traffic within a network?

1 / 1 point

- ☐ playbook
- ☐ security information and event management (SIEM)
- ☒ network protocol analyzer (packet sniffer)
- ☐ Structured Query Language (SQL)

 **Correct**

A packet sniffer, also known as a network protocol analyzer, is a tool designed to capture and analyze data traffic within a network.

2. What type of tool uses dashboards to organize data into categories and allows analysts to identify potential security incidents as they happen?

1 / 1 point

- ☒ SIEM
- ☐ Python
- ☐ network protocol analyzers (packet sniffers)

2. What type of tool uses dashboards to organize data into categories and allows analysts to identify potential security incidents as they happen?

1 / 1 point

- ☒ SIEM
- ☐ Python
- ☐ network protocol analyzers (packet sniffers)
- ☐ Linux

 **Correct**

SIEM tools use dashboards to organize data into categories and allow analysts to identify potential security incidents, such breaches, as they happen.

3. What can cybersecurity professionals use logs for?

1 / 1 point

- ☐ To analyze data traffic within a network
- ☐ To research and optimize processing capabilities within a network
- ☒ To identify vulnerabilities and potential security breaches
- ☐ To select which security team members will respond to an incident

 **Correct**

Cybersecurity professionals can use logs to identify vulnerabilities and potential security breaches, as well as other potential security incidents.

- ☐ To research and optimize processing capabilities within a network
- ☒ To identify vulnerabilities and potential security breaches
- ☐ To select which security team members will respond to an incident

 **Correct**

Cybersecurity professionals can use logs to identify vulnerabilities and potential security breaches, as well as other potential security incidents.

4. Fill in the blank: A _____ is a manual that provides details about operational actions.

1 / 1 point

- ☒ playbook
- ☐ directory
- ☐ checklist
- ☐ case history

 **Correct**

A playbook is a manual that provides details about operational actions. Playbooks provide guidance when handling a security incident before, during, and after it has occurred.
