1. Fill in the blank: An Internet Protocol (IP) address is a unique string of characters that identifies the _____ of a device on the internet.

1 / 1 point

- ☐ operating system
- ☒ location
- ☐ size
- ☐ speed

Correct

An IP address is a unique string of characters that identifies the location of a device on the internet.

2. Which of the following is an example of an IPv4 address?

1 / 1 point

- ☐ 25, 443, 20
- ☒ 172.16.254.1
- ☐ 2001:0db8:85a3:0000:0000:8a2e:0370:7336
- ☐ 00-B1-D0-63-C2-26

- ☐ 00-B1-D0-63-C2-26

Correct

An example of an IPv4 address is 172.16.254.1. IPv4 addresses are written as four, 1-3-digit numbers separated by decimal points. Each one can contain the values 0-255.

3. What type of address is assigned by an internet service provider and connected to a geographic location?

1 / 1 point

- ☒ Public IP address
- ☐ MAC address
- ☐ WAN address
- ☐ Private IP address

Correct

A public IP address is assigned by an internet service provider and shared by all devices on a local area network. It is connected to geographic location. All communications from devices in the same local area have the same public-facing address due to network address translation or a forwarding proxy.

4. Fill in the blank: A switch uses a MAC _____ to direct data packets to the correct device.

1 / 1 point

- ☒ address table

- ☐ MAC address
- ☐ WAN address
- ☐ Private IP address

Correct

A public IP address is assigned by an internet service provider and shared by all devices on a local area network. It is connected to geographic location. All communications from devices in the same local area have the same public-facing address due to network address translation or a forwarding proxy.

4. Fill in the blank: A switch uses a MAC _____ to direct data packets to the correct device.

1 / 1 point

- ☒ address table
- ☐ geographic location
- ☐ home network
- ☐ public address

Correct

A switch uses a MAC address table to direct data packets to the correct device.
