1. What is the National Institute of Standards and Technology (NIST) Cybersecurity Framework (CSF)?

1 / 1 point

- ☐ A required business framework for ensuring security updates and repairs are successful
- ☐ A set of security controls that help analysts determine what to do if a data breach occurs
- ☒ Standards, guidelines, and best practices that organizations follow voluntarily in order to manage cybersecurity risk
- ☐ A collection of security principles focused on maintaining confidentiality, integrity, and availability

**Correct**

The NIST CSF is a voluntary framework that consists of standards, guidelines, and best practices to manage cybersecurity risk.

2. Fill in the blank: The six core functions that make up the CSF are: govern, identify, protect, detect, \_\_\_\_\_, and recover.

1 / 1 point

- ☐ regulate
- ☒ respond

2. Fill in the blank: The six core functions that make up the CSF are: govern, identify, protect, detect, \_\_\_\_\_, and recover.

1 / 1 point

- ☐ regulate
- ☒ respond
- ☐ reevaluate
- ☐ reflect

**Correct**

The six core functions that make up the CSF are: govern, identify, protect, detect, respond, and recover.

3. Fill in the blank: The CSF \_\_\_\_\_ function involves understanding an organization's assets, risks, and policies to establish a strong foundation for managing cybersecurity threats.

1 / 1 point

- ☐ protect
- ☒ identify
- ☐ recover
- ☐ respond

**Correct**

The CSF identify function involves understanding an organization's assets, risks, and policies to

3. Fill in the blank: The CSF \_\_\_\_\_ function involves understanding an organization's assets, risks, and policies to establish a strong foundation for managing cybersecurity threats.

1 / 1 point

- ☐ protect
- ☒ identify
- ☐ recover
- ☐ respond

**Correct**

The CSF identify function involves understanding an organization's assets, risks, and policies to establish a strong foundation for managing cybersecurity threats.

4. What does a security analyst's work involve during the CSF recover function?

1 / 1 point

- ☐ Pinpoint threats and improve monitoring capabilities
- ☐ Contain, neutralize, and analyze security incidents
- ☐ Protect an organization through the implementation of employee training
- ☒ Return affected systems back to normal operation

**Correct**

During the recover function, a security analyst's work involves returning affected systems back to normal operation.
