1. In the event of a security incident, when would it be appropriate to refer to an incident response playbook? 1 / 1 point

- ☐ Only prior to the incident occurring
- ☐ At least one month after the incident is over
- ☒ Throughout the entire incident
- ☐ Only when the incident first occurs

Correct

In the event of a security incident, it is appropriate to refer to an incident response playbook throughout the entire incident. An incident response playbook is a guide with six phases used to help mitigate and manage security incidents from beginning to end.

2. Fill in the blank: During the ____ phase, security professionals use tools and strategies to determine whether a breach has occurred and to evaluate its potential magnitude. 1 / 1 point

- ☐ preparation
- ☐ containment

- ☒ detection and analysis
- ☐ coordination

Correct

During the detection and analysis phase, security professionals use tools and strategies to determine whether a breach has occurred and to evaluate its potential magnitude.

3. In which incident response playbook phase would a security team document an incident to ensure that their organization is better prepared to handle future security events? 1 / 1 point

- ☒ Post-incident activity
- ☐ Eradication and recovery
- ☐ Coordination
- ☐ Containment

Correct

In the post-incident activity phase, a security team documents an incident to ensure that their organization is better prepared to handle future incidents.

4. What is the relationship between SIEM tools and playbooks? 1 / 1 point

- ☐ Eradication and recovery
- ☐ Coordination
- ☐ Containment

Correct

In the post-incident activity phase, a security team documents an incident to ensure that their organization is better prepared to handle future incidents.

4. What is the relationship between SIEM tools and playbooks? 1 / 1 point

- ☐ They work together to predict future threats and eliminate the need for human intervention.
- ☒ They work together to provide a structured and efficient way of responding to security incidents.
- ☐ Playbooks collect and analyze data, then SIEM tools guide the response process.
- ☐ Playbooks detect threats and generate alerts, then SIEM tools provide the security team with a proven strategy.

Correct

SIEM tools and playbooks work together to provide a structured and efficient way of responding to security incidents.
