1. Which of the following statements describe security incidents and events?

1 / 1 point

- ☐ Security incidents and events are unrelated.
- ☐ Security incidents and events are the same.
- ☒ All security incidents are events, but not all events are security incidents.
- ☐ All events are security incidents, but not all security incidents are events.

 **Correct**

2. What is the NIST Incident Response Lifecycle?

1 / 1 point

- ☐ A system that only includes regulatory standards and guidelines
- ☐ The process used to document events
- ☒ A framework that provides a blueprint for effective incident response
- ☐ The method of closing an investigation

 **Correct**

3. Which step does the NIST Incident Response Lifecycle begin with?

1 / 1 point

- ☐ Detection and Analysis
- ☐ Containment, Eradication and Recovery
- ☒ Preparation
- ☐ Post-Incident Activity

 **Correct**

4. What is a computer security incident response team (CSIRT)?

1 / 1 point

- ☐ A specialized group of security professionals who are solely dedicated to crisis management
- ☒ A specialized group of security professionals who are trained in incident management and response
- ☐ A specialized group of security professionals who work in isolation from other departments
- ☐ A specialized group of security professionals who focus on incident prevention

 **Correct**

5. What is an incident response plan?

1 / 1 point

- ☒ A document that outlines the procedures to take in each step of incident response
- ☐ A document that outlines a security team's contact information
- ☐ A document that details system information
- ☐ A document that contains policies, standards, and procedures

 **Correct**

6. A cybersecurity analyst receives an alert about a potential security incident. Which type of tool should they use to examine the alert's evidence in greater detail?

1 / 1 point

- ☐ A documentation tool
- ☐ A recovery tool
- ☒ An investigative tool
- ☐ A detection tool

 **Correct**

7. Which statement most accurately describes documentation?

1 / 1 point

- ☐ It is a standardized format used to record information across all industries.
- ☒ It can be audio, video, or written instructions used for a specific purpose.
- ☐ It serves as legal documentation and evidence in official settings.
- ☐ It is always digital and stored in a centralized database.

✔ Correct

8. What is the difference between an intrusion detection system (IDS) and an intrusion prevention system (IPS)?

1 / 1 point

- ☐ An IDS automates response and an IPS generates alerts.
- ☐ An IDS and an IPS both have the same capabilities.
- ☒ An IDS monitors system activity and alerts on intrusive activity whereas an IPS stops intrusive activity.
- ☐ An IDS stops intrusive activity whereas an IPS monitors system activity and alerts on intrusive activity.

✔ Correct

9. What is an example of a workflow that can be automated through security orchestration, automation, and response (SOAR)?

1 / 1 point

- ☒ The analysis and response to a security incident
- ☐ The analysis of a centralized platform
- ☐ The creation of potential threats
- ☐ The creation of raw log data

✔ Correct

10. Fill in the blank: During the _____ step of the SIEM process, the collected raw data is transformed to create log record consistency.

1 / 1 point

- ☐ data aggregation
- ☒ data normalization
- ☐ data analysis
- ☐ data collection

✔ Correct
