Preparation: the planning and training process

The organization takes action to ensure it has the correct tools and resources in place:

- Set up uniform company email conventions
- Create a collaborative, ethical environment where employees feel comfortable asking questions
- Provide cybersecurity training on a quarterly basis

Detection and analysis: the detect and assess process

Security professionals create processes to detect and assess incidents:

- Identify signs of an incident
- Filter external emails to flag messages containing attachments such as voicemails
- Have an incident response plan to reference
