

Your grade: 100%Your latest: **100%** • Your highest: **100%** • To pass you need at least 75%. We keep your highest score.[Next item →](#)

1. Fill in the blank: ____ are malicious code or behaviors that are used to take advantage of coding flaws in a web application.

1 / 1 point

- ☐ Social engineering
- ☒ Web-based exploits
- ☐ Spear phishing
- ☐ Command-line interface

Correct

Web-based exploits are malicious code or behaviors that are used to take advantage of coding flaws in a web application.

2. Cross-site scripting (XSS) attacks are often delivered by exploiting which of the following languages? Select two answers.

1 / 1 point

- ☒ JavaScript

Correct

XSS attacks are delivered by exploiting the two languages used by most websites, HTML and JavaScript.

- ☐ Python
- ☐ SQL
- ☒ HTML

Correct

XSS attacks are delivered by exploiting the two languages used by most websites, HTML and JavaScript.

3. Fill in the blank: A ____ is a coding technique that executes SQL statements before passing them onto the database.

1 / 1 point

- ☐ phishing kit
- ☐ SQL injection
- ☒ prepared statement
- ☐ botnet

Correct

A prepared statement is a coding technique that executes SQL statements before passing them onto

the database. Prepared statements are used to defend against SQL injection attacks by validating code before performing a query.

4. What are two examples of when SQL injections can take place?

1 / 1 point

- ☐ When a malicious script exists in the webpage a browser loads
- ☒ When using the login form to access a site

Correct

Two examples of when SQL injections can take place are when using the login form to access a site and when a user enters their credentials. SQL injection can take place in areas of the website that are designed to accept user input.

- ☒ When a user enters their credentials

Correct

Two examples of when SQL injections can take place are when using the login form to access a site and when a user enters their credentials. SQL injection can take place in areas of the website that are designed to accept user input.

- ☐ When a malicious script is injected directly on the server

and when a user enters their credentials. SQL injection can take place in areas of the website that are designed to accept user input.

☐ When a malicious script is injected directly on the server

5. In a SQL injection attack, malicious hackers attempt to obtain which of the following? Select two answers.

1 / 1 point

☐ Passwords that are stored securely

☒ Administrative rights

✔ Correct

Malicious hackers target attack vectors to obtain sensitive information, modify tables, and even gain administrative rights to the database.

☒ Sensitive information

✔ Correct

In a SQL injection attack, malicious hackers attempt to obtain sensitive information and gain administrative rights.

☐ Operating System
