Categorization exercise

Explore: Apply PASTA to an application's threat model

Review the item, and then select the stage of the PASTA framework that it describes

You've categorized everything.

Stage

Stage 1: Define business and security objectives

✓ The team determines the retailer wants their app to protect customer data.

Stage 2: Define the technical scope

✓ The team identifies the application components that must be evaluated.

Stage 3: Decompose the application

✓ The team identifies existing controls that will protect user data from attackers.

Stage 4: Perform a threat analysis

✓ The team gathers up-to-date intelligence on types of mobile-app attacks.

Stage 5: Perform a vulnerability analysis

✓ The team more deeply investigates potential vulnerabilities related to the app.

Stage 6: Conduct attack modeling

✓ The team creates an attack tree and maps vulnerabilities to attack vectors.

Stage 7: Analyze risk and impact
