1. Which filter outputs all records with values in the `date` column between '01-01-2015' (January 1, 2015) and '01-04-2015' (April 1, 2015)?

1 / 1 point

- ☐ `WHERE date > '01-01-2015';`
☒ `WHERE date BETWEEN '01-01-2015' AND '01-04-2015';`
☐ `WHERE date < '01-04-2015';`
☐ `WHERE date BETWEEN '01-01-2015', '01-04-2015';`

✓ Correct

 The filter `WHERE date BETWEEN '01-01-2015' AND '01-04-2015';` outputs all records with values in the date column between '01-01-2015' and '01-04-2015'.

2. Which operator is most efficient at returning all records with a `status` other than 'successful'?

1 / 1 point

- ☐ `OR`
☐ `AND`
☒ `NOT`

☐ `BETWEEN`

✓ Correct

`NOT` is most efficient at returning all records with a status other than 'successful'. The `NOT` operator negates a condition. In this case, it can be used in a filter of `WHERE NOT status = 'successful';`.

3. You are working with the `Chinook` database. You want to find the first and last names of customers who have a value in the `country` column of either 'Brazil' or 'Argentina'. Replace `--???` with the missing information to complete the query. (If you want to undo your changes to the query, you can click the Reset button.)

1 / 1 point

```

1 SELECT firstname, lastname, country
2 FROM customers
3 where country = 'Brazil' OR country = 'Argentina';

```

Run

Reset

How many customers are from Brazil or Argentina?

- ☐ 4
☐ 5
☒ 1

☒ 6

✓ Correct

6 customers are from Brazil or Argentina. By replacing `--???` with `WHERE country = 'Brazil' OR country = 'Argentina';`, you can complete the query and return this result.

4. While working as an analyst, you encounter a query that includes the following filter:

1 / 1 point

`SELECT *`
`FROM customers`
`WHERE country = 'USA' AND state = 'NV';`

What will this query return?

- ☐ Information about customers who do *not* have a value of 'USA' in the `country` column or do *not* have a value of 'NV' in the `state` column.
☒ Information about customers who have a value of 'USA' in the `country` column *and* a value of 'NV' in the `state` column.
☐ Information about customers who have a value of 'USA' in the `country` column *or* a value of 'NV' in the `state` column.
☐ Information about customers who do *not* have a value of 'USA' in the `country` column but do have a value of 'NV' in the `state` column.

4. While working as an analyst, you encounter a query that includes the following inter:

1 / 1 point

```
SELECT *  
FROM customers  
WHERE country = 'USA' AND state = 'NV';
```

What will this query return?

- ☐ Information about customers who do *not* have a value of 'USA' in the **country** column or do *not* have a value of 'NV' in the **state** column.
- ☒ Information about customers who have a value of 'USA' in the **country** column *and* a value of 'NV' in the **state** column.
- ☐ Information about customers who have a value of 'USA' in the **country** column or a value of 'NV' in the **state** column.
- ☐ Information about customers who do *not* have a value of 'USA' in the **country** column but do have a value of 'NV' in the **state** column.

✔ Correct

The query returns information about customers who have a value of 'USA' in the **country** column and a value of 'NV' in the **state** column. The **AND** operator specifies that both conditions must be met simultaneously.
