1. Which of the following are steps in the vulnerability management process. Select two answers.

1 / 1 point

☒ Prepare defenses against threats☒ Correct

Vulnerability management is an internal process that includes identifying vulnerabilities and preparing defenses against threats.

☐ Assign a CVE® ID☒ Identify vulnerabilities☒ Correct

Vulnerability management is an internal process that includes identifying vulnerabilities and preparing defenses against threats.

☐ Catalog organizational assets

2. An organization is attacked by a vulnerability that was previously unknown. What is this exploit an example of?

1 / 1 point

☒ A zero-day☐ A cipher☐ A perimeter layer☐ An asset☒ CorrectA zero-day refers to an exploit that was *previously unknown*.

3. Which layer of the defense in depth strategy is a user authentication layer that mainly filters external access?

1 / 1 point

☐ Data☒ Perimeter☐ Network☐ Endpoint☒ Correct

The perimeter layer consists of authentication technologies that let verified users in.

☒ Correct

The perimeter layer consists of authentication technologies that let verified users in.

4. A security researcher reports a new vulnerability to the CVE® list. Which of the following criteria must the vulnerability meet before it receives a CVE® ID? Select two answers.

1 / 1 point

☒ It must be independently fixable.☒ Correct

Criteria that must be met are that vulnerabilities should be independently fixable and must have supporting evidence.

☒ The submission must have supporting evidence.☒ Correct

Criteria that must be met are that vulnerabilities should be independently fixable and must have supporting evidence.

☐ It must affect multiple applications.☐ The vulnerability must be unknown to the developer.
