1. In Python, what is a function?

1 / 1 point

- ☐ A section of code that contains a conditional
- ☐ A section of code that contains an iterative statement
- ☐ A section of code that exists directly in Python
- ☒ A section of code that can be reused in a program

Correct

A Python function is a section of code that can be reused in a program.

2. Which of the following keywords is essential when defining a function?

1 / 1 point

- ☐ `if`
- ☐ `while`
- ☒ `def`
- ☐ `for`

Correct

The `def` keyword is essential when defining a function. It is placed before a function name to define it.

3. You want to define a function that performs a status check. Which of the following is a valid header for the function definition?

1 / 1 point

- ☐ `def status_check()`
- ☒ `def status_check():`
- ☐ `def status_check:`
- ☐ `def status_check`

Correct

A valid header for the function definition is `def status_check():`. Headers should include the `def` keyword, the name of the function followed by parentheses, and a colon (:).4. You are responsible for defining a function `alert()` that prints out the statement "Security issue detected." Which of the following blocks of code represent the correct indentation for defining and then calling the function?

1 / 1 point

☒

```
1 def alert():
2     print("Security issue detected.")
3     alert()
```

☐

```
1 def alert():
2     print("Security issue detected.")
3     alert()
```

☐

```
1 def alert():
2     print("Security issue detected")
3     alert()
```

☐

```
1 def alert():
2     print("Security issue detected")
3     alert()
```

☐

```
1 | def alert():
2 |     print("Security issue detected")
3 |     alert()
```

☒ Correct

When defining and then calling a function `alert()` that prints out the statement "Security issue detected.", the following block of code demonstrates correct indentation:

```
1 | def alert():
2 |     print("Security issue detected.")
3 |     alert()
```

The only part that should be indented is the body of the function definition. In this case, the body is the line with the `print()` function.
