

Identify: Select the correct iterative statement

[Close X](#)

Desired output

You want to print 3 numbers from a list.

Iterative statement

`for i in range(4):`
`print(i)` ☐

`for i in [8, 9, 10]:`
`print(i)` ☒

`for i in [3, 4, 7, 10]:`
`print(i)` ☐

`for i in range(3, 10):`
`print(i)` ☐

1 of 6

[NEXT >](#)

Identify: Select the correct iterative statement

[Close X](#)

Desired output

You want to print the message "Access denied" 5 times.

Iterative statement

`for i in [2, 8, 9, 10]:`
`print("Access denied")` ☐

`for i in range(5):`
`print("Access denied")` ☒

`for i in range(1, 7):`
`print("Access denied")` ☐

`for i in [5]:`
`print("Access denied")` ☐

Identify: Select the correct iterative statement

[Close X](#)

Desired output

You want to print out a sequence of numbers starting at 10 and ending at 30.

Iterative statement

`for i in [10, 20, 30]:`
`print(i)` ☐

`for i in range(10, 31):`
`print(i)` ☒

`for i in range(30):`
`print(i)` ☐

`for i in range(10, 30):`
`print(i)` ☐

[NEXT >](#)

Identify: Select the correct iterative statement

[Close X](#)

Desired output

You want to print a message that tells the user to "try again" as long as the value of the attempt variable is 5 or less, and you want to increase the value of this variable by 1 each time it passes through the loop.

Iterative statement

```
attempt = 1
while attempt <= 5:
    print("Try again.")
```

☐

```
attempt = 1
while attempt < 5:
    print("Try again.")
    attempt = attempt + 1
```

☐

```
attempt = 1
```

[NEXT >](#)

Identify: Select the correct iterative statement

[Close X](#)

```
attempt = 1
while attempt <= 5:
    print("Try again.")
```

☐

```
attempt = 1
while attempt < 5:
    print("Try again.")
    attempt = attempt + 1
```

☐

```
attempt = 1
while attempt != 5:
    print("Try again.")
```

☐

```
attempt = 1
while attempt <= 5:
    print("Try again.")
    attempt = attempt + 1
```

☒[< BACK](#)

4 of 6

[NEXT >](#)

Identify: Select the correct iterative statement

[Close X](#)

You want to print out the numbers 20, 19, 18, 17, and 16.

Iterative statement

```
i = 20
while i > 15:
    print(i)
    i = i - 1
```

☒

```
i = 20
for i in range(15):
    print(i)
```

☐

```
i = 20
while i < 15:
    print(i)
```

☐

```
i = 20
for i in [20, 16]:
    print(i)
```

☐[< BACK](#)

5 of 6

[NEXT >](#)

Identify: Select the correct iterative statement

[Close X](#)

Desired output

You want to welcome 3 users from a list by their name (for example, "Welcome, Emerick Larson").

Iterative statement

```
name = ["Emrick Larson", "Estrella Ortiz", "Tori Shah"]
i = 1
while i <= 3:
    print("Welcome,", i)
    i = i + 1
```

☒

```
name = ["Emrick Larson", "Estrella Ortiz", "Tori Shah"]
for i in range(3):
    print("Welcome,", i)
```

☐

```
name = ["Emrick Larson", "Estrella Ortiz", "Tori Shah"]
for i in name:
```

☒

Identify: Select the correct iterative statement

[Close X](#)

```
name = ["Emrick Larson", "Estrella Ortiz", "Tori Shah"]
i = 1
while i <= 3:
    print("Welcome,", i)
    i = i + 1
```

☒

```
name = ["Emrick Larson", "Estrella Ortiz", "Tori Shah"]
for i in range(3):
    print("Welcome,", i)
```

☐

```
name = ["Emrick Larson", "Estrella Ortiz", "Tori Shah"]
for i in name:
    print("Welcome,", i)
```

☒

```
name = ["Emrick Larson", "Estrella Ortiz", "Tori Shah"]
for i in name:
    print("Welcome,", name)
```

☐
