1. What is the job of a computer's operating system?

1 / 1 point

- ☐ Load the bootloader
- ☒ Help other computer programs run efficiently
- ☐ Allow users to specify tasks
- ☐ Turn on the computer

Correct

The job of a computer operating system is to help make other computer programs run efficiently. It does this by managing the details related to controlling computer hardware.

2. Fill in the blank: In order to carry out tasks on a computer, users directly interact with ____.

1 / 1 point

- ☒ applications
- ☐ the CPU
- ☐ the BIOS
- ☐ task managers

- ☐ task managers

Correct

Users interact with applications in order to carry out tasks on a computer. Applications are programs that perform a specific task.

3. The management of a computer's resources and memory is handled by an application.

1 / 1 point

- ☐ True
- ☒ False

Correct

The management of a computer's resources and memory is handled by its operating system. The operating system ensures the limited capacity of the computer system is used where it's needed most.

4. Which of the following processes are part of starting an operating system? Select all that apply.

1 / 1 point

- ☒ The bootloader starts the operating system.

Correct

Either the BIOS or UEFI microchip is activated when a user turns on a computer. The BIOS or UEFI microchip loads the bootloader, and the bootloader starts the operating system.

4. Which of the following processes are part of starting an operating system? Select all that apply.

1 / 1 point

- ☒ The bootloader starts the operating system.

Correct

Either the BIOS or UEFI microchip is activated when a user turns on a computer. The BIOS or UEFI microchip loads the bootloader, and the bootloader starts the operating system.

- ☐ The bootloader immediately launches when a user turns on a computer.

- ☒ Either the BIOS or UEFI microchip is activated when a user turns on a computer.

Correct

Either the BIOS or UEFI microchip is activated when a user turns on a computer. The BIOS or UEFI microchip loads the bootloader, and the bootloader starts the operating system.

- ☒ The BIOS or UEFI microchip loads the bootloader.

Correct

Either the BIOS or UEFI microchip is activated when a user turns on a computer. The BIOS or UEFI microchip loads the bootloader, and the bootloader starts the operating system.
