1. Which of the following potential signs of suspicious activity can you track with automated Python programs? Select all that apply.

1 / 1 point

☒ Whether login attempts occurred outside of normal work hours

Correct

Using automated Python programs, you can track whether several failed login attempts occurred within a short span of time, whether login attempts occurred outside of normal work hours, and whether login attempts occurred from IP addresses that are not established work zones. In all of these cases, you can obtain the data needed for Python automation.

☒ Whether several failed login attempts occurred within a short span of time

Correct

Using automated Python programs, you can track whether several failed login attempts occurred within a short span of time, whether login attempts occurred outside of normal work hours, and whether login attempts occurred from IP addresses that are not established work zones. In all of these cases, you can obtain the data needed for Python automation.

☐ Whether phishing attempts occurred through in-person interactions☒ Whether login attempts occurred from IP addresses that are not established work zones

Correct

Using automated Python programs, you can track whether several failed login attempts occurred within a short span of time, whether login attempts occurred outside of normal work hours, and whether login attempts occurred from IP addresses that are not established work zones. In all of these cases, you can obtain the data needed for Python automation.

2. Which Python component contributes to automation by allowing you to perform the same actions a certain number of times based on a sequence?

1 / 1 point

☐ Conditional statements☐ Bracket notation☐ `while` loops☒ `for` loops

Correct

Python `for` loops contribute to automation by allowing you to perform the same action a certain number of times based on a sequence.

3. Why is knowing how to work with files important for automation?

1 / 1 point

☐ It is necessary to save a file in order to review what you have automated.☐ String and list methods are only accessible through files.☒ Cybersecurity-related information is often found in log files.☐ In order to create a function, it's necessary to incorporate a file into it.

Correct

Knowing how to work with files is important for automation because cybersecurity-related information is often found in log files.

4. Which of the following are common file formats for security logs? Select all that apply.

1 / 1 point

☒ `.txt`

Correct

Common file formats for security logs include `.txt` and `.csv`. Both file formats are types of text files, meaning they only contain plain text. It is easy to extract data from `.txt` and `.csv` files.

☒ `.csv`

Correct

Common file formats for security logs include `.txt` and `.csv`. Both file formats are types of text files, meaning they only contain plain text. It is easy to extract data from `.txt` and `.csv` files.

☐ `.jpeg`

 Correct

Knowing how to work with files is important for automation because cybersecurity-related information is often found in log files.

4. Which of the following are common file formats for security logs? Select all that apply.

1 / 1 point

☒ **.txt** Correct

Common file formats for security logs include **.txt** and **.csv**. Both file formats are types of text files, meaning they only contain plain text. It is easy to extract data from **.txt** and **.csv** files.

☒ **.csv** Correct

Common file formats for security logs include **.txt** and **.csv**. Both file formats are types of text files, meaning they only contain plain text. It is easy to extract data from **.txt** and **.csv** files.

☐ **.jpeg**☐ **.gif**
