1. Fill in the blank: A security _____ is a set of guidelines used for building plans to help mitigate risk and threats to data and privacy.

1 / 1 point

- ☐ regulation
- ☒ framework
- ☐ lifecycle
- ☐ control

 **Correct**

Security frameworks are guidelines used for building plans to help mitigate risk and threats to data and privacy.

2. An organization requires its employees to complete a new data privacy training program each year to reduce the risk of a data breach. What is this training requirement an example of?

1 / 1 point

- ☒ Security control
- ☐ Personally identifiable information (PII)

2. An organization requires its employees to complete a new data privacy training program each year to reduce the risk of a data breach. What is this training requirement an example of?

1 / 1 point

- ☒ Security control
- ☐ Personally identifiable information (PII)
- ☐ Data confidentiality
- ☐ Cybersecurity Framework (CSF)

 **Correct**

Security controls are safeguards designed to reduce specific security risks.

3. What is a foundational model that informs how organizations consider risk when setting up systems and security policies?

1 / 1 point

- ☒ Confidentiality, integrity, and availability (CIA) triad
- ☐ Sensitive personally identifiable information (SPII)
- ☐ General Data Protection Regulation law (GDPR)
- ☐ Cybersecurity Framework (CSF)

 **Correct**

The CIA triad is a foundational model that helps inform how organizations consider risk when setting up systems and security policies.

Security policies:

- ☒ Confidentiality, integrity, and availability (CIA) triad
- ☐ Sensitive personally identifiable information (SPII)
- ☐ General Data Protection Regulation law (GDPR)
- ☐ Cybersecurity Framework (CSF)

 **Correct**

The CIA triad is a foundational model that helps inform how organizations consider risk when setting up systems and security policies.

4. Security teams use the NIST Cybersecurity Framework (CSF) as a baseline to manage short and long-term risk.

1 / 1 point

- ☒ True
- ☐ False

 **Correct**

Security teams use the NIST CSF as a baseline to manage short and long-term risk. The CSF is a voluntary framework that consists of standards, guidelines, and best practices to manage cybersecurity risk.
